Professional Profile

Computer Science Engineer (EPN, 2026) with over 2 years of production-level experience. I specialize in developing frontend modules using Vue.js and React, and I lead end-to-end (E2E) testing architectures with Playwright on GitHub Actions CI/CD pipelines. My expertise includes designing event-driven systems on AWS and engineering a local Retrieval-Augmented Generation (RAG) architecture capable of processing 26,000 concurrent queries with a 23ms latency. I am seeking a Frontend or QA Automation role where quality is integrated from the very beginning of the development lifecycle.

Languages: Spanish (Native) • English (B1 / B2)

Professional Experience

Frontend Developer & QA Automation | Wanqara – E-Invoicing SaaS for PYMES

Jun 2024 – Ago 2026 • Contract • Remote • Ecuador

- Developed and actively maintain two client-facing frontend modules currently in production: a Kitchen Display System (KDS) for real-time order management and a POS Status Viewer, leveraging Vue.js, Pinia, and TanStack Query.
- Designed and implemented the E2E testing suite from scratch using Playwright (20+ active tests), integrating smoke tests in the develop branch and comprehensive regression testing upon merging to main.
- Configured CI/CD pipelines in GitHub Actions featuring concurrency management and adaptive API_TIMEOUTs, successfully resolving race conditions in waitForResponse that previously caused false negatives during CI runs.

Frontend Developer | AntsOfEcuador – Plataforma Científica de Registro de Biodiversidad

May 2025 – Jul 2025 • Freelance • Productions-Ready • Ecuador

- Engineered and deployed a scientific platform for tracking ant species (React + FastAPI + PostgreSQL) within a 2-month timeframe, effectively replacing manual spreadsheet-based workflows.
- Built a data import pipeline with automated taxonomic validation against the AntCat API, integrated with D3.js geospatial visualizations for regional analysis.

Featured Projects

3D Virtual Assistant with RAG Architecture – Capstone, EPN 2026

- Implemented local RAG using Qdrant as an alternative to model fine-tuning; this architecture allows for straightforward embedding updates compared to the costly retraining required when institutional regulations frequently change.
- Utilized vLLM (PagedAttention) paired with Redis semantic caching for inference, successfully processing 26,000 concurrent queries with zero failures, 23ms latency, and 100% prompt injection mitigation. Developed a 3D frontend using Vue 3 and Three.js, deployed on a Linux/Nginx server with SSL.

Stack: *Vue 3 · Three.js · FastAPI · RAG · Qdrant · vLLM · Redis · Python · Nginx*

Shoplight — E-commerce Cloud & EDA • github.com/cristian-diaz2402/ShoplightAWS

- Designed an Event-Driven Architecture (EDA) on AWS: configured SQS as a buffer for order spikes, SNS for inventory alerts, Multi-AZ PostgreSQL within a private VPC, DynamoDB for immutable auditing, and Rekognition for automated visual tagging.
- Validated system resilience through Chaos Engineering on Elastic Beanstalk, achieving automatic recovery with zero service interruption.

Stack: *Vue 3 · Node.js · Docker · AWS (VPC, EC2, RDS, S3, SQS, SNS, DynamoDB, Rekognition)*

Capibara Bot — Robotics, HCI & ML • github.com/cristian-diaz2402/CapibaraBot

- Built an ESP32-based educational robot controlled via an Android Bluetooth app. Applied a Random Forest model for user telemetry (using a low-dimensional tabular dataset for an interpretable and lightweight model). Evaluated usability using the SUS scale, achieving results comparable to industry benchmarks.

Stack: *ESP32 · C++ · Android (Kotlin) · Python · FastAPI · Random Forest (Scikit-learn)*

Education

B.S. in Computer Science Engineering - Escuela Politécnica Nacional (EPN), Quito, Ecuador

• Graduated august 2026

Technical Skills

Languages y Frameworks: *Vue.js · React · TypeScript · Python · FastAPI · Node.js*

Infraestructure y Data Base: *AWS (EC2, S3, RDS, VPC, SQS, SNS) · Docker · PostgreSQL · Qdrant · Redis · DynamoDB · Nginx*

Quality Assurance & Tools: *Playwright · GitHub Actions (CI/CD) · Git · Jira · Linux (Ubuntu)*

IA y Machine Learning: *vLLM · Ollama · LangChain · RAG · Random Forest (Scikit-learn)*

Hardware y Systems: *C++ para embebidos (ESP32) · OpenGL / GLSL · Sistemas Distribuidos (Oracle)*
